

PROFILE

Independent designer & developer building brand systems, DESIGN.md token specs, and production print/editorial layouts — delivered end-to-end with AI-assisted workflows. I sell the system, not the artifact: a reusable brand + token spec + layout kit your team can extend, not a one-off file. I design in the same tools I ship in — HTML/CSS, TypeScript, and Python — so what I hand over is production output, not a handoff.

SELECTED WORK

Casa Revista AI · BRAND · PRINT

B2B SaaS producing AI-generated, print-fulfilled in-room concierge magazines for boutique hotels — hotel website, Google Places, and calendar data turned into approved proofs via Prodigy print fulfillment.

- Authored the complete 359-line DESIGN.md token spec: Playfair Display / Inter type system, forest-green & gold editorial palette with AA/AAA contrast rules, spacing, elevation, and component library.
- Designed a "warm editorial luxury" system spanning marketing site, manager & admin portals, and A4 magazine pages — templates as preset block configurations (hero, grid, listicle, map, directory, cover) in a TipTap editor.
- Orchestration across 15 specialized content agents with per-run cost/latency tracing; print pipeline from quote to tracked delivery.

WeatherMan PRODUCT · TRADING PLATFORM

Autonomous weather prediction-market trading platform blending GFS/ECMWF/METAR forecasts into consensus probabilities and trading detected edges on Kalshi.

- Full-stack build: React Router v7 + Tailwind/shadcn dashboard, Hono + Prisma API, Python/FastAPI compute engine, PostgreSQL with pgvector; Docker multi-stage deploys.
- Designed the premium trading dashboard and live signal/portfolio views for a data-dense, real-time product.

Note Goat PLUGIN · PRODUCT DESIGN

Opinionated Obsidian plugin — daily notes, quick capture, habit tracking with a contribution-graph year view, and aggregated todos across a configurable vault.

- TypeScript plugin built with esbuild, plus an Omarchy desktop-shell companion panel (Quickshell) firing Obsidian URIs; documented via a binding decision ledger (D1–D7).

Omarchy THEME · ECOSYSTEM

Theme and desktop-ecosystem contribution work on the Arch-based Omarchy environment, including companion tooling for the Note Goat desktop shell.

HOW I WORK

- Every engagement ships a written DESIGN.md token spec alongside the visuals — colors, type, spacing, components, do's & don'ts.
- AI agents for production volume: brand systems, content, and layout at a scale one designer can't reach alone.
- I develop what I design — you get working HTML/CSS/TS, not mockups that need rebuilding.
- Clear async communication, fast iteration cycles, and honest scoping.
